

PERFORMANCE COMMENTARY

As choppy markets continue, the Fund has shown less volatility but was off 3.4% in March, with a strong sterling providing an additional headwind. For reference sake, the MSCI World was off 3.8% in the month.

A couple of our healthcare stocks performed well in March, with Glaxo and Taisho Pharmaceuticals of Japan both up over 5% in sterling terms. Glaxo rebounded after a few months of trading lower as the market liked its recent strategic decisions: avoiding a massive (and risky) acquisition of Pfizer’s consumer healthcare business, and instead removing uncertainty by buying Novartis out of their joint venture. Taisho continues to show strength as its results were positive and sentiment improves. Both shares remain inexpensive and should prove resilient irrespective of the direction of market trading. Munich Re was also resilient in difficult markets, with the market gaining confidence its domestic operation (Ergo) and in the reinsurance business where valuations remain low with an improving outlook. Our goldminer, Newmont, was also robust and is well placed with gold seen as a possible beneficiary of global uncertainty.

Neopost’s share price was weak over the period due to the market’s impatience over growth in its new businesses, which did not materialise in the most recent results. Cash flow generation is still strong, the shares pay an attractive dividend, and the market continues to price Neopost at extreme valuations – a situation that we are happy to take advantage of. Sky NZ fell over the period, on negative news regarding the Rugby World Cup. The shares are extraordinarily inexpensive.

INVESTMENT TEAM

Charles L. Heenan CFA & Geoff Legg

Charles and Geoff have worked together as an investment team since the inception of the portfolio in July 2007. Both focus exclusively on the management of the Fund. They are fully aligned with investors, each having 100% of his investment in equities in the Fund.

RELATIVE PERFORMANCE

We focus on long-term, absolute performance, not on short-term relative returns.

We are not benchmarked.

Comparisons to the MSCI World, MSCI World Value and IA Global indices are for illustrative purposes only.

We would expect that Fund weightings (geographic, sector and market cap) may vary considerably from those of the MSCI and IA indices.

Track Record Description & Methodology

\* The portfolio was launched in July 2007 ("Inception") in Australia as the Contrarian Global Value Fund. The Kennox investment team ran that fund from launch until September 2008. The Kennox Strategic Value Fund was launched in April 2009, comprising 19 of the 20 positions that existed in the Australia fund. We have assumed a static portfolio for the interim period.

Performance shown reflects total return of the Institutional Share class. Performance figures are generated from the accumulation shares since their launch on 29 April 2013. Prior to that performance figures are taken from an alternative share class, adjusted to reflect a 1.0% management fee throughout.

+ Sharpe Ratio is calculated as annualised return divided by the standard deviation of the excess return over the Libor 3m Bond yield.

+ Volatility is calculated as the standard deviation of the natural log returns multiplied by the square root of the periodicity of the returns.

Performance figures shown are total return with data for Kennox and the MSCI provided by Kennox/Bloomberg and IA Global data provided by Morningstar

**Important Information**

The information in this document does not constitute, or form part of, any offer to sell or issue, or any offer to purchase or subscribe for shares, nor shall this document or any part of it or the fact of its distribution form the basis of or be relied on in connection with any contract. Interests in any investment funds managed by Kennox Asset Management will be offered and sold only pursuant to the prospectus relating to such funds.

The Kennox Strategic Value Fund ("Fund") should be considered a long-term investment. You should be aware that the Fund is permitted to invest in markets which are not as well developed or regulated as the UK. As such, investments in those markets may be less liquid, and may have less reliable custody arrangements. Therefore, they may be prone to above average volatility and carry more risk. Where investments are made in smaller companies, these companies' shares may be less liquid than larger companies and the price swings may therefore be greater. You should remember that the value of investments and the income derived therefrom may fall as well as rise and you may not get back the amount that you invest. Past performance is not a guide to future returns.

The Fund is denominated in £ sterling. You should be aware that if sterling appreciates or depreciates against the currencies in which investments are made, this could have an effect on the value of your investment. An investment in the Fund carries a degree of risk and retail investors should seek professional advice before investing in the Fund. Kennox has not taken any steps to ensure that the securities referred to in this document are suitable for any particular investor and no assurance can be given that the stated investment objectives will be achieved.
